1	Introduction	9
1.1	Outline of this book	10
2	Image analysis	13
2.1	Amplitude domain analysis	13
2.2	Frequency domain analysis	15
2.3	The sampling theorem	18
2.4	Multi-dimensional signals and spectra	20
2.5	3D sampling and alias in image sequences	23
2.6	Geometrical operations on discrete images	25
2.7	Arithmetical operations on discrete images	26
2.8	Questions	28
3	The parameters of the digital video format	29
3.1	Spatially sampling images	29
3.2	Brightness quantization	31
3.3	The spectrum of the quantization error	32
3.4	Image and video compression	34
3.5	Sampling color images	36
3.6	Motion and the video spectrum	39
3.7	Sampling video in the temporal domain	40
3.8	Spatio-temporal sampling and human vision	42
3.9	Discrete image display	43
3.10	Questions	46
4	Image filtering and interpolation	49
4.1	Linear filtering of discrete video	49
4.1.1	Filter terminology	50
4.1.2	Inverse filter	52
4.2	Calculating with impulse responses	53
4.3	Qualitative analysis of linear filters	54
4.4	The purpose and design of image filters	57

4.4.1	Optimization of filter coefficients	58
4.4.2	Image re-sizing and sampling-rate conversion	61
4.5	Non-linear image filtering	64
4.6	Adaptive filtering	67
4.6.1	Adapt filter through neighborhood selection	70
4.7	Quantitative analysis of linear filters	72
4.7.1	Analysis of FIR filters	73
4.7.2	Analysis of IIR filters	75
4.8	Questions	76
5	Image enhancement	79
5.1	Sharpness improvement	79
5.1.1	Linear peaking	80
5.1.2	Non-linear edge enhancement	84
5.2	Resolution up-conversion	89
5.2.1	Tegenbosch <i>et al.</i>	89
5.2.2	Kondo <i>et al.</i>	91
5.2.3	Atkins	92
5.2.4	Li <i>et al.</i>	94
5.2.5	Evaluation of resolution up-conversion methods	94
5.3	Contrast improvement	95
5.3.1	Gamma processing	96
5.3.2	Automatic black	97
5.3.3	Soft clipping	100
5.3.4	Histogram modification	101
5.3.5	Details of a digital histogram modification design	102
5.3.6	Ambient light adaptation	107
5.4	Color reproduction improvement	107
5.4.1	Green enhance	108
5.4.2	Gamma and modern primaries	108
5.4.3	Skin-tone correction	109
5.4.4	Blue stretch	109
5.4.5	Over-saturation protection	110
5.5	Questions	110
6	Coding artifact reduction	113
6.1	Image compression	113
6.2	Compression artifacts	116
6.2.1	Blocking	116
6.2.2	Ringing	117
6.2.3	Blurring	118
6.2.4	Mosquito noise	118
6.3	Artifact analysis tools	118
6.3.1	Block-grid detection	119
6.3.2	Artifact severeness metric	120

6.4	Blocking artifact repair	122
6.4.1	Adaptive filtering	122
6.4.2	Projection onto convex sets	136
6.4.3	Constrained least square regularization	140
6.4.4	MAP-based restoration	145
6.4.5	Anisotropic diffusion	147
6.4.6	Hybrid algorithms	148
6.4.7	MPEG-4 two-mode de-blocking	148
6.5	Discussion	150
7	Picture rate conversion	153
7.1	First-order linear picture interpolation	154
7.1.1	Motion portrayal with first-order interpolation	156
7.1.2	What film-directors do	158
7.1.3	Formal description of first-order interpolation	159
7.2	Higher-order linear picture interpolation	160
7.3	Interpolation with central weighted medians	162
7.4	Motion compensated picture interpolation	164
7.4.1	Motion compensated first-order linear interpolation	165
7.4.2	Higher-order MC picture interpolation	168
7.5	Non-linear MC picture interpolation	169
7.5.1	MC Static median filtering	169
7.5.2	MC Dynamic median filtering	171
7.5.3	Reciprocal mixing	171
7.5.4	Cascaded median filtering	173
7.5.5	MC central weighted median filtering	174
7.6	Occlusion adapted picture interpolation	175
7.6.1	Vector field re-timing	176
7.6.2	Occlusion adapted interpolation	179
7.7	Reliability testing and fall-back	182
7.8	Questions	182
8	De-interlacing	185
8.1	Linear techniques	186
8.1.1	Spatial filtering	187
8.1.2	Temporal filtering	188
8.1.3	VT filtering	189
8.2	Non-linear techniques	189
8.2.1	Motion-adaptive algorithms	189
8.2.2	Implicit motion-adaptive methods	190
8.2.3	Directional interpolation	191
8.2.4	Hybrid methods	193
8.3	Motion compensated methods	194
8.3.1	Temporal backward projection	195
8.3.2	TR de-interlacing	196

8.3.3	Interlace and generalized sampling	198
8.4	Hybrids with motion compensation	201
8.5	Questions	201
9	Display specific processing	203
9.1	Display specific artifacts	204
9.1.1	Linear delay variations depending on pixel position	204
9.1.2	Non-linear delay variations	206
9.1.3	Non-fixed delay due to sample-and-hold display	207
9.2	Display specific artifact reduction	209
9.2.1	Color sequential displays	211
9.2.2	Tiled displays	212
9.2.3	Displays with an increased picture-rate	213
9.2.4	Liquid Crystal Displays	214
9.2.5	Plasma Display Panels	216
9.3	Conclusion	219
9.4	Questions	220
10	Motion estimation	221
10.1	Historical developments in motion estimation	222
10.2	Pel-recursive estimators	224
10.3	Block-matching algorithms	226
10.3.1	The match criterion	228
10.3.2	Efficient search strategies	229
10.4	True-motion estimation	232
10.4.1	Hierarchical motion estimation	235
10.4.2	Phase plane correlation	236
10.4.3	Recursive search block-matching	238
10.5	Global motion models	241
10.5.1	Upgrading an efficient block matcher with a global motion model	242
10.6	Object based motion estimation	243
10.6.1	Brief overview of methods	243
10.6.2	An example object based estimator	245
10.7	Evaluation of motion estimation methods	252
10.7.1	Estimator performance testing	253
10.7.2	Evaluation results	260
10.7.3	Subjective evaluation of vector fields	264
10.8	Conclusion	269
10.9	Questions	270
